MacBook Pro Retina

LMP Battery MacBook Pro 13" Retina

PRODUCT OVERVIEW

Glued to the case? Can't repair Retina battery? LMP "solves" this problem with the new LMP Battery MacBook Pro Retina by not only providing the high capacity replacement battery but also including the right solvent and a set of tools to dissolve and remove the original battery safely and with little effort. The solvent has been scientifically proven to dissolve the glue which is used by Apple to glue-in the battery to the case while at the same time not damaging the hardware parts when applied correctly. With the help of the included tools and replacement guide, the entire removal process is safe, cost-effective and time-saving. The high quality LMP replacement battery can then be installed and glued to the case again for optimal user satisfaction.

Solvent and tools

Although the solvent can be applied safely and has low toxic side effects, we strongly recommend that the removal process is performed by a computer technician or specialist only. It requires a fair amount of skill and knowledge about (Apple) laptop hardware as well as a proper worktop and notebook screwdrivers. Note that the required screwdrivers to open the case and remove parts inside the MacBook Pro Retina are not included.
