Take your gaming to the next level with this RGB illuminated anti-ghosting keyboard from DELTACO GAMING. We have equipped this keyboard with RGB lighting as a backlight for the keys but also for the side panels. The RGB lighting has 12 different modes that you control yourself using key commands.

In order for you to be able to play for a long time without destroying your wrists, we created this keyboard with an ergonomic S-shape on the keys. The keys are in a so-called "floating cap design", this means that the keys sit a bit above the base of the keyboard itself. To last longer than many other gaming keyboards, we use membrane switches that have a slightly longer lifespan than mechanical switches. To be truly embraced by real hardcore gamers, we have provided the keyboard with a 25-key anti-ghosting and a polling rate of 125Hz, this interplay means that you are guaranteed to get that last spell/fragment to decide the match in those crucial milliseconds in battle.

The base of this keyboard has a brushed aluminum plate for extra durability and true gaming feel. At the bottom you have a bar in durable ABS plastic and in each top corner at the bottom you have a foot that has a rubber strip under it to keep the keyboard in place during intense gaming.
