

PVA 3D Filament

PVA is commonly used as a support material for complex prints.

PVA, or Polyvinyl Alcohol, is a soft and biodegradable polymer that is highly sensitive to moisture. When exposed to water, PVA will actually dissolve, which makes it a very useful support structure material for 3D printing.

When printing extremely complex shapes or ones with partially enclosed cavities, PVA supports can be used and easily removed by dissolving in warm water. Standard supports may have been difficult to print or remove in these situations.

Gearlab® PVA 3D Filament comes in white only.

Properties

Diameter	1.75 / 2.85 mm
Tolerance	0.05 mm
Weight	0.5 kg
Printing temperature	190-220°C
Printing speed	60-90 mm/s
Layer resolution	0.2 mm
Hot bed	Not required
Printing raft	Not required
Printing substrate	Not required
Tensile strength	≥ 10 Mpa
Impact strength	≥ 1.4 KJ/m
Elongation at break	11%
Distortion temperature	≥ 55°C

Features

- Support material for PLA type filaments in dual extruder printers
- For complex models with hollow structures or high angles of inclination
- Dissolves in warm water at normal temperature, leaving the PLA printed parts untouched
